SYSTEM

IP Telephone & Communication Service

Our assistance can give you the power to control your information flow to make better, faster, more innovative business decisions. Through collaboration, your employees will access to more information, gain mobility and increase productivity.

IP Camera

INFINITY working with various manufactures to Improve your security and provide IP camera Security Solutions which are designed as easy-to-use software and hardware IP network products that include image capture, analysis, storage, transfer, and playback of high quality video surveillance footage with visually lossless compression (no perceptible loss of visual detail, Security Solutions may be configured into a customized, end-to-end, integrated intelligent security system that provides high quality video and data using relatively low bandwidth.

Services

Simplifying IT solutions

MA TV,SA TV,IP TV

INFINITY provides MA TV ,SATV , IP TV solution in various villas and building projects, it's a solution for capturing and distributing radio and television signals. We have progressively incorporated other products and solutions in complementary areas such as the measurement tools required by professional installers, or solutions related to new audiovisual service distribution technologies. Working with well known brands to provide a guarantee of quality in taking television signals to the very last socket in the home, whether DTT, satellite or IPTV, using coaxial, fibre optic or hybrid solution networks.

Services

Simplifying IT solutions

Audio/Video, PA System

INFINITY provides innovative audio products and solutions, PA systems with many speakers are widely used to make announcements in public, institutional and commercial buildings and locations—such as school, stadiums, and passenger vessels and aircraft. Intercom systems, installed in many buildings, have both speakers throughout a building, and microphones in many rooms so occupants can respond to announcements. PA and Intercom systems are commonly used as part of an emergency communication system.

Q Management System

Queue management systems is to quantify queue demand at any given time and inform your staff in real-time. People counting sensors placed above each checkout count the number of customers being served, the number of customers waiting to be served and measure how long they have been in queue. Queue management as an approach used to develop more efficient systems that can reduce customer waiting times or perceived waiting times for service. The aim is to increase both the number of customers that can be served and customer satisfaction with the entire queue experience.

Intrusion Detection System

An intrusion detection system is a device or software application that monitors a network or systems for malicious activity or policy violations. Any intrusion activity or violation is typically reported either to an administrator or collected centrally using a security information and event management system.

IP Clock System

IP clocks automatically synchronize over an Ethernet network using NTP or SNTP to a local or internet time server. Clocks are maintenance free and require no operator intervention. Timezone and daylight saving changes are configurable and entirely automatic.

Services

Simplifying IT solutions

Access Control/ Time attendance System

INFINITY provides wired and wireless access control provides security by giving flexible control over who is allowed to enter your premises. Access control system is one of the most common used system in electronic door control using a card or a magnetic stripe which can be accessed by swiping through a reader on the door, where the wireless It offers the same security and convenience as a wired access control system but with the additional flexibility of being wireless, meaning less cabling and therefore quick and simple installation for minimal disruption.

Tokens are issued to allow access through the controlled doors and are easily barred from the system if they are lost or stolen.as part of a networked system offering a versatile access control solution that can grow with the needs of your site.

Intercom & Door Video System

INFINITY Provide wired and wireless solution intercom system is a two-way communication electronic device that contains circuitry for the purpose of transmitting and receiving audio and/or video transmissions.

There are still lots of applications like offices and villas where these devices still work better than anything else. There are a very wide variety of systems available in various brands.

Data Center Service

Infinity offers datacenter solutions for a host of problems. Our solution specialists are responsive to the unique needs of customers. By anticipating problems and developing optimal designs, on time and within budget.

Infinity specializes in products and product-based services that integrate to provide solutions for a host of IT-centric environments including: datacenters, computer rooms, server rooms/closets, MDFs, IDF, wiring/network closets, phone rooms, network operation centers, command bridges and general office area environments that effectively route power, voice & data to workstations through trading floors.

Services

Simplifying IT solutions

Structured Cabling

Cabling installations are carried out to the highest standards, and our experienced and certified on-site engineering team ensures that the entire installation is fully tested using the latest technology before it is completed and signed off. All our work is certified and we provide an after-sales contract tailored to your needs and budget.

We take great pride in providing structured cabling solutions that come with extensive warranties and are capable of outperforming any other in the marketplace. With partners the most thoroughly trained technicians in the industry, we are confident that you will find Infinity a trusted partner.

We are providing the solutions like,

Design and engineering of a complete end to end structured cabling system, Site survey and material preparation, Structured cabling design and documentation Installation and termination services, Testing and certification, Cabling plant expansion and migration, Cable tracing and labeling, MT/PVC Conduit and cable tray installation, Rack and cable organizing, Active component installation and patching, Telephone cabling Etc.

Fiber Optic Network Service

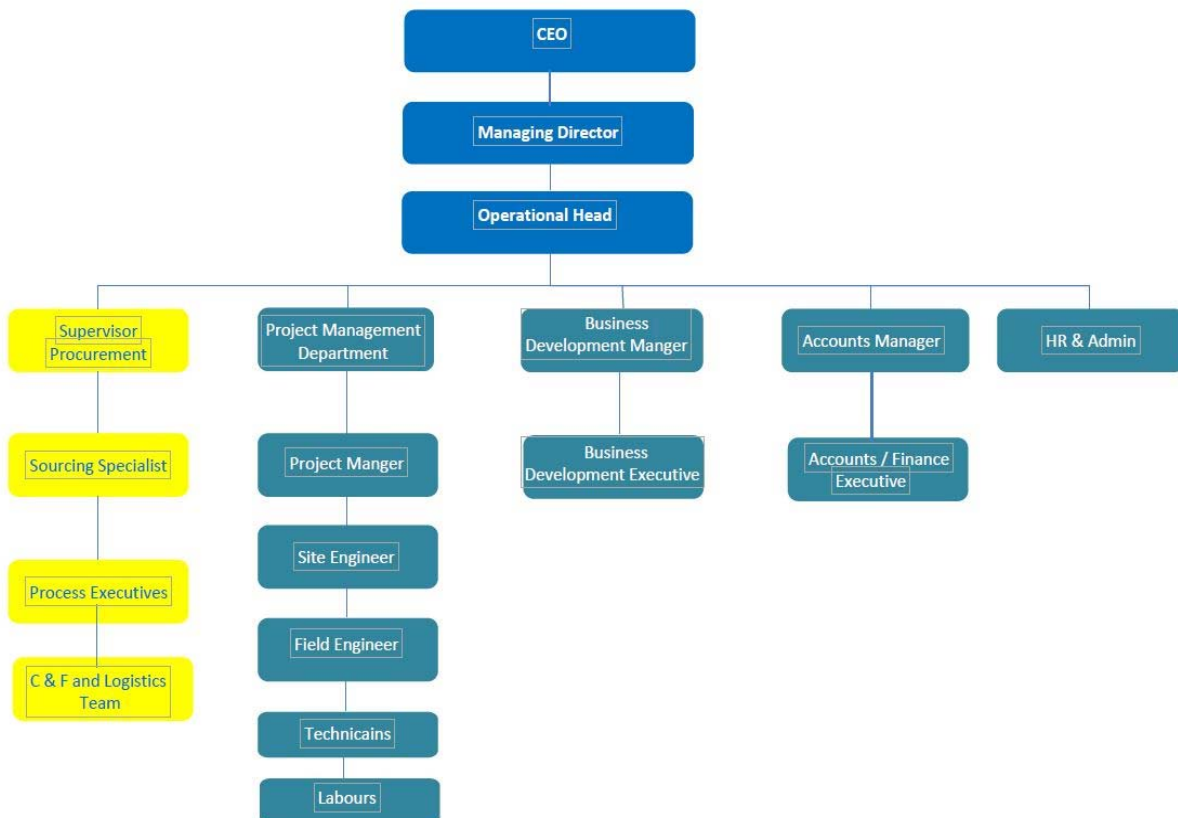

We plan, design, estimate and categorize our clients based on the size or required bandwidth they use for the business applications accordingly we suggest the type of Network data cabling facility required for our clients.

Fiber optic data cabling allows communication signals to be transmitted much faster, at a higher bandwidth and over much greater distances than copper data cabling systems. Because light is transmitted at a much higher frequency

We are providing the solutions like,

Supply of fiber optic cable and accessories, Site survey and network design, Installation of fiber cable and accessories, Termination, Splicing of fiber cable ,OTDR,FLUKE testing and certification for the fiber cable, Fiber cable management and documentation, Expansion, up gradation, Fiber optic material Supply.
